\* Notice is required for PM, PM10, and PM2.5 if one of these pollutants is above the threshold.

\*\* Notice of a GHG action is determined by action type. Initial and major modification always require notice. Voluntary updates require a consolidated notice if there is a change to BACT. Project emission increases of CO<sub>2</sub>e (CO<sub>2</sub> equivalent) are not relevant for determining public notice of GHG permit actions.

#### B. Application Type

To help determine whether public notice is required, answer the following questions.

| Question                                                       | Response | Notes                                                                                                                                          |  |
|----------------------------------------------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------|--|
|                                                                |          |                                                                                                                                                |  |
| Are any HAPs to be authorized/re-authorized with this project? | Yes      | The category "HAPs" must be specifically listed in the public notice if the project authorizes (reauthorizes for renewals) any HAP pollutants. |  |
|                                                                |          |                                                                                                                                                |  |

#### C. Applicability Determination

Read the determination and provide a discussion if you disagree with the results or the table above.

| Requested information                                                   | Response | Notes                                                                                    |  |
|-------------------------------------------------------------------------|----------|------------------------------------------------------------------------------------------|--|
| Is public notice required for this project as represented in this PI-1? | Yes      | Public notice applicability for this project may change throughout the technical review. |  |
|                                                                         |          |                                                                                          |  |

#### II. Public Notice Information

Complete this section to provide critical administrative information for the public notice process.

##### A. Contact Information

1. Enter the contact information for the person responsible for publishing. This representative is responsible for ensuring public notice is properly published in the appropriate newspaper and signs are posted at the facility site. The TCEQ will contact this person directly when it is time to authorize the public notice for the application.
2. Enter the contact information for the Technical Contact. This representative will be listed in the public notice as a contact for additional information.

| Requested information         | Person Responsible for Publishing | Technical Contact                   |  |
|-------------------------------|-----------------------------------|-------------------------------------|--|
| Prefix (Mr., Ms., Dr., etc.): | Mr.                               | Ms.                                 |  |
| First Name:                   | Charles                           | Elizabeth                           |  |
| Last Name:                    | Hamilton                          | Stanko                              |  |
| Title:                        | Director of Development           | Director, Energy Transition Project |  |
| Company Name:                 |                                   | TRC Companies                       |  |
| Mailing Address:              | 600 S. Tyler Suite 1501           | 11767 Katy Fwy Suite 230            |  |
| Address Line 2:               |                                   |                                     |  |
| City:                         | Amarillo                          | Houston                             |  |

**B. Public place**

Place a hard copy of the full application (including the entire completed PI-1 and all attachments) at a public place in the county where the facilities are or will be located. You must state where in the county the application will be available for public review and comment. The location must be a public place and described in the notice. A public place is a location which is owned and operated by public funds (such as libraries, county courthouses, city halls) and cannot be a commercial enterprise. You are required to pre-arrange this availability with the public place indicated below. The application must remain available from the first day of publication through the designated comment period.

If this is an application for a PSD, nonattainment, or FCAA § 112(g) permit, the public place must have internet access available for the public as required in 30 TAC § 39.411(f)(3).

If the application is submitted to the agency with information marked as Confidential, you are required to indicate which specific portions of the application are not being made available to the public. These portions of the application must be accompanied with the following statement:"**Any request for portions of this application that are marked as confidential must be submitted in writing, pursuant to the Public Information Act, to the TCEQ Public Information Coordinator, MC 197, P.O. Box 13087, Austin, Texas 78711-3087."**

| Requested information                                                                               | Response                     |
|-----------------------------------------------------------------------------------------------------|------------------------------|
| Name of Public Place:                                                                               | Carson County Public Library |
| Physical Address:                                                                                   | 401 Main St.                 |
| Address Line 2:                                                                                     |                              |
| City:                                                                                               | Panhandle                    |
| ZIP Code:                                                                                           | 76068                        |
| County:                                                                                             | Carson                       |
| Has the public place granted authorization to place the application for public viewing and copying? | Yes                          |
| Does the public place have Internet access available for the public?                                | Yes                          |

### C. Alternate Language Publication

In some cases, public notice in an alternate language is required. If an elementary or middle school nearest to the facility is in a school district required by the Texas Education Code to have a bilingual program, bilingual notice will be required. If there is no bilingual program required in the school nearest the facility, but children who would normally attend those schools are eligible to attend bilingual programs elsewhere in the school district, the bilingual notice will also be required. If it is determined that alternate language notice is required, you are responsible for ensuring that the publication in the alternate language is complete and accurate in that language.

| Question                                                                                                                                                                        | Response |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--|
| Is a bilingual program required by the Texas Education Code in the School District?                                                                                             | Yes      |  |
| Are the children who attend either the elementary school or the middle school closest to your facility eligible to be enrolled in a bilingual program provided by the district? | Yes      |  |
| If yes to either question above, list <b>all languages</b> required by the bilingual program.                                                                                   | Spanish  |  |

### III. Public Notice Information for PSD and Nonattainment Permits

| <b>A. How will public notice be published for the GHG PSD permit?</b> Select either "Separate" or "Combined". Note: separate public notices require separate applications.                                                                                                                                            |              | Combined          |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|-------------------|
| <b>B. Contact Information</b><br>We must notify the applicable county judge, presiding officer, and regional council of government when a PSD or Nonattainment permit or modification application is received.                                                                                                        |              |                   |
| 1. Provide the information for the County Judge for the location where the facility is or will be located.<br>2. Provide the information for the Presiding Officer(s) of the municipality for this facility site. This is frequently the Mayor.<br>3. Provide the information for the Regional Council of Government. |              |                   |
| This information can be obtained at the links below.<br><a href="https://www.txdirectory.com">https://www.txdirectory.com</a><br><a href="https://txregionalcouncil.org/regional-councils/">https://txregionalcouncil.org/regional-councils/</a>                                                                      |              |                   |
| Requested information                                                                                                                                                                                                                                                                                                 | County Judge | Presiding Officer |
| The Honorable:                                                                                                                                                                                                                                                                                                        | Dan Looten   | n/a               |
| First Name:                                                                                                                                                                                                                                                                                                           | n/a          | n/a               |

### C. Affected States and Class I Areas

A map of all Class I areas can be found at the link below:

<https://www.nps.gov/subjects/air/class1.htm>

| Are there any affected states or Class I areas within 100 km of the proposed facilities? |  |  |  |  |  |
|------------------------------------------------------------------------------------------|--|--|--|--|--|
| No                                                                                       |  |  |  |  |  |

**IV. Small Business Classification**

Complete this section to determine small business classification. If a small business requests a permit, agency rules (30 TAC § 39.603(f)(1)(A)) allow for alternative public notification requirements if all of the following criteria are met. If these requirements are met, public notice does not have to include publication of the prominent (12 square inch) newspaper notice.

| Question                                                                                                                                                | Response |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--|
| Does the company (including parent companies and subsidiary companies) have fewer than 100 employees or less than \$6 million in annual gross receipts? | No       |  |
|                                                                                                                                                         |          |  |
|                                                                                                                                                         |          |  |
|                                                                                                                                                         |          |  |
| Small business classification:                                                                                                                          | No       |  |

**V. Plain Language Summary**

Applications deemed administratively complete on or after May 1, 2022 must provide a plain language summary of the application to be posted on the TCEQ website. Templates can be found at the link below.

<https://www.tceq.texas.gov/permitting/air/guidance/newsourcesreview/nsrapp-tools.html>

| Question                                                                                                                | Response |  |
|-------------------------------------------------------------------------------------------------------------------------|----------|--|
| Is a Plain Language Summary as required by 30 TAC § 39.405(k) provided with the application?                            | Yes      |  |
| Is a Plain Language Summary in an alternative language as required by 30 TAC § 39.426(c) provided with the application? | Yes      |  |

[illegible]

| II. Nonattainment NSR Applicability Summary                                                                                                                                       |                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Step 1: Determine if the site is in a nonattainment area for any criteria pollutant(s) or precursor(s).</b>                                                                    |                                                                                                                                     |
| County (selected in General sheet section IV):                                                                                                                                    | Carson                                                                                                                              |
|                                                                                                                                                                                   |                                                                                                                                     |
| Current nonattainment designation:                                                                                                                                                | This project will be located in an area currently designated attainment or unclassified for all criteria pollutants and precursors. |
| Should the project be reviewed under a different nonattainment designation? If yes, select the correct reason.                                                                    | No - use current designation                                                                                                        |
|                                                                                                                                                                                   |                                                                                                                                     |
|                                                                                                                                                                                   |                                                                                                                                     |
|                                                                                                                                                                                   |                                                                                                                                     |
|                                                                                                                                                                                   |                                                                                                                                     |
|                                                                                                                                                                                   |                                                                                                                                     |
|                                                                                                                                                                                   |                                                                                                                                     |
| Step 1 Determination: This project will be located in an area designated attainment or unclassified for all criteria pollutants or precursors. Nonattainment NSR is not required. |                                                                                                                                     |
|                                                                                                                                                                                   |                                                                                                                                     |
|                                                                                                                                                                                   |                                                                                                                                     |

#### IV. PSD Applicability Summary

##### Step 1: Determine if the project is a named source.

Select the source type that most closely matches the facility in this application. If no source type applies, select "Other/Not Listed". Note: This list is based on 40 CFR § 51.166(b)(1)(i)(a).

Fossil fuel-fired steam electric plants > 250 million BTUs per hour heat input

Step 1 Determination: This is a named source and the PSD major source threshold is 100 tpy of any one pollutant. Include fugitive emissions in the current sitewide PTE.

##### Step 2: Determine if the site is currently major by comparing the current sitewide PTE to the major source threshold. Read the step 1 determination above for information about including or excluding fugitive emissions in the PTE calculation.

| Pollutant                                | Current Sitewide PTE (tpy)<br>enter ">" to indicate the site is major for PSD | Major Source Threshold (tpy) | Current Sitewide PTE ≥ Major Source Threshold? |
|------------------------------------------|-------------------------------------------------------------------------------|------------------------------|------------------------------------------------|
| CO                                       | 0                                                                             | 100                          | No                                             |

| Reduced sulfur compounds (including H2S) | 0                                                                             | 100                          | No                                             |
| H2SO4                                    | 0                                                                             | 100                          | No                                             |
| Fluoride (excluding HF)                  | 0                                                                             | 100                          | No                                             |

Step 2 Determination: The current sitewide PTE for each regulated pollutant is below the associated major source threshold. The site is currently a minor source. If there are sources at the site other than those in the Unit Types - Emission Rates sheet, remember to attach a list of authorization numbers, FINs, EPNs, and PTEs. Continue to the next step.

##### Step 3: Determine if the project emissions increase is a major source by itself. Compare the project emissions increase of each pollutant to the associated major source threshold. Include fugitive emissions in the project emissions increase calculation if this is a named source.

| Pollutant                                | Project Emissions Increase (tpy) | Major Source Threshold (tpy) | Increase ≥ Threshold? |
|------------------------------------------|----------------------------------|------------------------------|-----------------------|
| CO                                       | 2140.86                          | 100                          | Yes                   |

Step 3 Determination: The project emissions increase of at least one regulated pollutant is at or above the major source threshold. PSD review is required for these pollutants, unless it already underwent nonattainment NSR applicability review. Evaluate the remaining pollutants in the next step. Remember to attach Table 2F for each criteria pollutant or precursor to demonstrate how the increase was calculated.

| Pollutant                                                                                                                                                                                                                                                                                                                                                                                                 | Project Emissions Increase (tpy) | Significant Level (tpy) | Increase ≥ Threshold? |

| Step 4 Determination: The project emissions increase is at or above the associated significant level for at least one remaining regulated pollutant. PSD review is required for these pollutants in addition to the pollutants identified in step 3. Remember to attach Table 3F for each pollutant to demonstrate how the increase was calculated. Also attach Table 4F to verify creditable reductions. |                                  |                         |                       |

|                                                                                                                                                                                                                                                                          |                                |                        |                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|------------------------|------------------------------|
| <b>Step 1: Determine whether the project requires PSD permitting for a non-GHG regulated pollutant.</b>                                                                                                                                                                  |                                |                        |                              |
| Step 1 Determination: At least one other regulated pollutant requires PSD permitting.                                                                                                                                                                                    |                                |                        |                              |
| <b>Step 2: Determine whether this is an existing or a new major stationary source for PSD.</b>                                                                                                                                                                           |                                |                        |                              |
| Step 2 Determination: This is a new major stationary source for PSD.                                                                                                                                                                                                     |                                |                        |                              |
| <b>Step 3: Determine whether the CO<sub>2</sub>e PTE equals or exceeds the major source threshold. Compare the CO<sub>2</sub>e PTE to the major source threshold. Include fugitive emissions in the project emission increase calculation if this is a named source.</b> |                                |                        |                              |
|                                                                                                                                                                                                                                                                          |                                |                        |                              |
| <b>Pollutant</b>                                                                                                                                                                                                                                                         | <b>Potential to Emit (tpy)</b> | <b>Threshold (tpy)</b> | <b>Increase ≥ Threshold?</b> |
| CO <sub>2</sub> e                                                                                                                                                                                                                                                        | 23,584,211.38                  | 75,000                 | Yes                          |
| Step 3 Determination: The CO <sub>2</sub> e PTE is 75,000 tpy or more. GHG permitting is required. Remember to attach Table 2F for each pollutant to demonstrate how the increase was calculated.                                                                        |                                |                        |                              |
|                                                                                                                                                                                                                                                                          |                                |                        |                              |
|                                                                                                                                                                                                                                                                          |                                |                        |                              |
|                                                                                                                                                                                                                                                                          |                                |                        |                              |
|                                                                                                                                                                                                                                                                          |                                |                        |                              |
|                                                                                                                                                                                                                                                                          |                                |                        |                              |

|                                              |                                                                                                                                 |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Nonattainment:</b>                        | Nonattainment NSR is not required.                                                                                              |
| <b>PSD:</b><br>(expand row height if needed) | PSD review is required for the following pollutants: Ozone (as VOC), Ozone (as NOx), NOx, SO2, CO, PM, PM10, PM2.5, H2S, H2SO4. |
| <b>GHG PSD:</b>                              | GHG PSD is required.                                                                                                            |

| I. Expedited Permitting Request                                                                                      |          |
|----------------------------------------------------------------------------------------------------------------------|----------|
| Are you requesting to expedite this project?                                                                         | Yes      |
| Is this request being made at the time of initial application submittal, as opposed to part way through the project? | Yes      |
|                                                                                                                      |          |
| Surcharge amount due:                                                                                                | \$20,000 |
|                                                                                                                      |          |
| Must request expedited processing and pay the surcharge when submitting the ePermit application through STEERS.      |          |
|                                                                                                                      |          |

In signing the "General" sheet with this fee worksheet attached, I certify that the total estimated capital cost of the project as defined in 30 TAC § 116.141 is equal to or less than the above figure. I further state that I have read and understand Texas Water Code § 7.179, which defines Criminal Offenses for certain violations, including intentionally or knowingly making, or causing to be made, false material statements or representations.

|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSQA-3 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |         |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |         |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |
|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |

|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRS GA-6 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |          |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |          |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |

Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGB-3 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |         |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |         |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |

Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                        | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM <sub>10</sub> /PM <sub>2.5</sub> formation.                      |
|                  |         |                                      | CO <sub>2</sub> Equivalent     | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |
|                  |         |                                      |                                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      |                                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      |                                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      |                                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      | MSS                            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGB-5 | Turbine: Combined Cycle, Natural Gas | VOC                            | 2 ppmvd at 15% O <sub>2</sub> if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O <sub>2</sub> .                                             |
|                  |         |                                      | NO <sub>x</sub>                | 2.0 ppmvd at 15% O <sub>2</sub> , 24-hour average, typically achieved with dry low NO <sub>x</sub> burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                    | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NO <sub>x</sub> at 15% O <sub>2</sub> .                                                                           |
|                  |         |                                      | CO                             | 2-4 ppmvd at 15% O <sub>2</sub> , typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                  | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O <sub>2</sub> .                                             |
|                  |         |                                      | NH <sub>3</sub>                | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO <sub>2</sub>                | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H <sub>2</sub> SO <sub>4</sub> | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | PM                             | The emission reduction techniques for PM <sub>10</sub> and PM <sub>2.5</sub> will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                        | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM <sub>10</sub> /PM <sub>2.5</sub> formation.                      |
|                  |         |                                      | CO <sub>2</sub> Equivalent     | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |

|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGB-8 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |         |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |

|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGB-12 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |          |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |

|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRS GC-4 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |          |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |

Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |          |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRS GC-7 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |          |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |

|                  |           |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |           |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRS GC-14 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |           |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |           |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |           |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |           |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |           |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |

Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSKD-1 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |         |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |         |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |
|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSKD-2 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |         |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |         |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |

|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRS GD-6 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O <sub>2</sub> if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O <sub>2</sub> .                                             |
|                  |          |                                      | NOx            | 2.0 ppmvd at 15% O <sub>2</sub> , 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O <sub>2</sub> .                                                                                       |
|                  |          |                                      | CO             | 2-4 ppmvd at 15% O <sub>2</sub> , typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                  | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O <sub>2</sub> .                                             |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O <sub>2</sub> , achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                      | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |          |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |

|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGE-5 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |         |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |         |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |

|                  |         |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |         |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGE-8 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |         |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |         |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |         |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 qr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |         |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |         |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |

Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGE-16 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                             | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |          |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                               | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                    | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                 | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |
|                  |          |                                      | CO2 Equivalent | Fill out the Additional Notes column to demonstrate how BACT will be met.                                                                                                                                                                                             | Yes     | Please refer to BACT writeup in application for detailed discussion.                                                                                                    |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      |                |                                                                                                                                                                                                                                                                       |         |                                                                                                                                                                         |
|                  |          |                                      | MSS            | Minimizing the duration of MSS activities and minimizing the amount of time the turbine is outside the performance mode where the controls can be used. Operating the facility in accordance with best management practices and good air pollution control practices. | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGE-17 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                            | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |

Operating the facility in accordance with best management practices and good air pollution control practices.                                                   | Yes     | Will minimize the duration of MSS activities and operate the facility in accordance with best management practices and good air pollution control practices.            |
| New/Modified     | HRSGE-18 | Turbine: Combined Cycle, Natural Gas | VOC            | 2 ppmvd at 15% O2 if no duct burner, 4 ppmvd with duct burner. Achieved through good combustion practices.                                                                                                                                                                                                              | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 2 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NOx            | 2.0 ppmvd at 15% O2, 24-hour average, typically achieved with dry low NOX burner, water/steam injection, limiting fuel consumption, or SCR. Specify numeric value and proposed technique.                                                                                                                               | Yes     | The turbines will utilize SCR to not exceed 2.0 ppmvd NOx at 15% O2.                                                                                                    |
|                  |          |                                      | CO             | 2-4 ppmvd at 15% O2, typically achieved with good combustion practices and/or oxidation catalyst. Specify numeric value and control technique. A detailed analysis is required if >4 ppmvd is proposed.                                                                                                                 | Yes     | The turbines will utilize good combustion practices and an oxidation catalyst to not exceed 4 ppmvd at 15% O2.                                                          |
|                  |          |                                      | NH3            | 7-10 ppmvd at 15% O, achieved by controlling the ammonia injection system to minimize ammonia slip                                                                                                                                                                                                                      | Yes     | The ammonia injection system will be monitored to ensure that the emissions will not exceed 5 ppmvd on an annual basis and 10 ppmvd on an hourly basis.                 |
|                  |          |                                      | SO2            | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                                                                   | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | H2SO4          | Good combustion practices. Fuel limited to firing pipeline quality natural gas (low sulfur fuel). Sulfur content of fuel will not exceed 5 grains per 100 scf on an hourly basis and 1 gr/100 scf on an annual basis.                                                                                                   | Yes     | The pipeline-quality natural gas used to fire the turbines has a maximum sulfur content of 0.5 grains per 100 scf. The turbines will utilize good combustion practices. |
|                  |          |                                      | PM             | The emission reduction techniques for PM10 and PM2.5 will follow the technique for PM. Good combustion practices. Fuel limited to firing pipeline quality natural gas.                                                                                                                                                  | Yes     | The turbines will utilize pipeline-quality natural gas and good combustion practices to minimize PM/PM10/PM2.5 formation.                                               |

Meeting the requirements of 40 CFR Part 60, Subpart IIII. Firing ultra-low sulfur diesel fuel (no more than 15 ppm sulfur by weight). Limited to 100 hrs./yr. of non-emergency operation. Have a non-resettable runtime meter.<br><br>No visible emissions shall leave the property. Visible emissions shall be determined by a standard of no visible emissions exceeding 30 seconds in duration in any six-minute period as determined using EPA TM 22 or equivalent | Yes     | Emergency engines fire ultralow sulfur diesel and are limited to 100 hours per year of non-emergency operation. Engines will install a non-resettable runtime meter and will meet requirements of 40 CFR Part 60 Subpart IIII.<br><br>No visible emissions shall leave the property and will be determine by EPA Test Method 22 or equivalent. |

| CT-7  | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |

| CT-8  | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |

| CT-9  | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |

| CT-10 | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |
|       |               |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |                                                                                                                                                                                                                                                      |                |  |

| CT-11 | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |

| CT-12 | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |

| CT-13 | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |
|       |               |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |                                                                                                                                                                                                                                                      |                |  |

| CT-14 | Cooling Tower | PM | The emission monitoring techniques for PM10 and PM2.5 will follow the technique for PM. Cooling water circulation rate measured hourly unless maximum circulation rate assumed.<br><br>Large (>50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water daily then reduced to weekly and quarterly with daily conductivity measurement that is correlated.<br><br>Small (<50,000 gpm circulation rate): Total Dissolved Solids (TDS) in the cooling water measured weekly. | Yes | The maximum design circulation rate will be used. As the circulation rate is greater than 50,000 gallons per minute, the TDS will be measured at daily, then reduced to weekly and quarterly with daily conductivity measurement that is correlated. | Record keeping |  |
|       |               |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |                                                                                                                                                                                                                                                      |                |  |

Fuel composition will be monitored periodically. A CEMS will be installed, with measurements at least four times per hour and averaged hourly.      | CEMS           |                                                      |
|           |                                      | NH3            | Monthly AVO inspections of the ventilation ductwork.                                                                                                                                                                                                                                                                   | Yes | The SCR will be continuously monitored to reduce ammonia slip.                                                                                                                                           | Other:         | Monitoring                                           |

|           |                                      |                |                                                                                                                                                                                                                                                                                                                        |     |                                                                                                                                                                                                          |                |                                                      |
