## **Texas Commission on Environmental Quality**

### **Form APD-EXP Expedited Permit Request**

#### **Instructions**

For more information on the expedited permitting program, please refer to the document titled “Initial Implementation of the Expedited Permitting Program” on our website at:

[www.tceq.texas.gov/assets/public/permitting/air/Guidance/NewSourceReview/epp-in-impl-guide-external-6258.pdf](http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/NewSourceReview/epp-in-impl-guide-external-6258.pdf).

#### **I. Contact Information**

List the legal name of the company, corporation, partnership, or person who is requesting to expedite the processing of the application. List the Customer Reference Number (CN) and the Regulated Entity Number (RN). Provide the name, telephone number, and e-mail address of the company official or technical contact. This person must have the authority to make binding agreements and representations on behalf of the applicant. Make sure all contact information matches the information provided on the application form associated with this request (e.g., PI-1).

#### **II. Project Information**

List the facility name, permit number, and project number, as applicable. Enter NA if this request accompanies an initial permit. This information should match the application form associated with this request (e.g., PI-1).

#### **III. Economic Justification**

Title 30 Texas Administrative Code (TAC) Chapter 101, Subchapter J, allows for permits to be expedited if the applicant can demonstrate that a project will “benefit the economy of this state or an area of this state.” Confirm that the purpose of the application associated with this request form will benefit the economy of this state or an area of this state by checking the appropriate box.

#### **IV. Delinquent Fees and Penalties**

The Air Permits Division will not expedite this application if any delinquent fees and applicable penalties are owed to the TCEQ or the Office of the Attorney General on behalf of the TCEQ, in accordance with TCEQ protocol for delinquent fees and penalties.

#### **V. Signature**

Please make sure a signature of the company official or technical contact is included in the application submitted to the TCEQ.

| The signature below confirms that I have knowledge of the facts included in this application and that these facts are true and correct to the best of my knowledge and belief. As the applicant, I commit to fulfilling all expectations of the expedited permitting program and application requirements promptly. Failure to meet any expectation or requirement may cause my application to be removed from the expedited permitting program and possibly voided at the discretion of the TCEQ Executive Director. The signature further signifies awareness that intentionally or knowingly making or causing to be made false material statements or representations in the application is a criminal offense subject to criminal penalties. |                                                                     |
| Name: Charlie Hamilton                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                     |
| Signature:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                     |
| Date:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                     |

Reset Form

**Air Permit Division Air Permit Support (APD-APS) Air Permitting Surcharge Payment  
Texas Commission on Environmental Quality**

To process a permit application as part of the expedited permit program, Air Permits Division (APD) requires a surcharge to cover expenses incurred to expedite the processing of an application using additional resources. The surcharge must be submitted along with the expedited request to Texas Commission on Environmental Quality (TCEQ).

**Instructions**

**I. Contact Information**

List the legal name of the company, corporation, partnership, or person who is requesting to expedite the processing of the application. List the Customer Reference Number (CN) and the Regulated Entity Number (RN). Provide the name, title, mailing address, telephone number, and e-mail address of the company official or technical contact. This person must have the authority to make binding agreements and representations on behalf of the applicant. Make sure all contact information matches the information provided on the application form associated with this request (e.g., PI-1).

**II. Project Information**

List the facility name, permit number, and project number, as applicable. This information should match Form Expedited Permit Request (APD-EXP).

**III. Surcharge Payment**

The fee amount for the various air permit projects are listed as follows:

| <b>Project Type</b>                               | <b>Fee Amount</b> |
|---------------------------------------------------|-------------------|
| Standard Permit (with public notice requirements) | \$3,000           |
| Title V General Operating Permit (GOP)            | \$3,000           |
| Title V Site Operating Permit (SOP)               | \$10,000          |
| NSR case-by-case permit                           | \$10,000          |
| Federal NSR permits                               | \$20,000          |

NSR case-by-case permit that accompanies a federal NSR permit does not have an additional surcharge.

Permits by rule (PBRs) and Standard Permit (which do not require public notice) must use the ePermits system and pay \$500 (**non-refundable**, flat surcharge). Surcharge will be collected through the ePermits system.

Mail the completed Form APD-APS Air Permitting Surcharge Payment and payment to:

TX Commission on Environmental Quality, Cashier's Office MC 214  
P.O. Box 13088, Austin, TX 78711-3088

**Plain Language Summary for New Source Review (NSR) Initial  
Application for Air New Source Review Permit Number [TBD]**

*The following summary is provided for this pending air permit application being reviewed by the Texas Commission on Environmental Quality as required by 30 Texas Administrative Code Chapter 39. The information provided in this summary may change during the technical review of the application and are not federal enforceable representations of the permit application.*

Fermi Equipment Holdco LLC (CN TBD) has submitted an air permit application for initial Permit Numbers [NSR# PSDTX# GHGPSDTX#] to authorize construction of a new natural gas-fired combined cycle power plant. The Fermi America Project Matador (RN TBD) will be installed at a greenfield site in Carson County. The site is located on the north side of US Route 60, approximately 15 miles northeast of Amarillo, Texas. The Fermi America Project Matador will provide electricity to an onsite data center campus.

Fermi Equipment Holdco LLC has listed in the application the pollutants and amounts that will be emitted for each facility. Below is the total amount for each pollutant that is proposed to be emitted each year for all the facilities.

| Pollutant                                                           | Proposed Emissions (tons per year) |
|---------------------------------------------------------------------|------------------------------------|
| Volatile Organic Compounds (VOC)                                    | 581.75                             |
| Carbon Monoxide (CO)                                                | 2,140.86                           |
| Nitrogen Oxides (NOx)                                               | 1,591.48                           |
| Sulfur Dioxide (SO <sub>2</sub> )                                   | 282.28                             |
| Ammonia (NH <sub>3</sub> )                                          | 1,370.78                           |
| Total Particulate Matter (PM)                                       | 1,075.12                           |
| Particulate Matter sized less than 10 Microns (PM <sub>10</sub> )   | 1,025.80                           |
| Particulate Matter sized less than 2.5 Microns (PM <sub>2.5</sub> ) | 976.69                             |
| Sulfuric Acid (H <sub>2</sub> SO <sub>4</sub> )                     | 43.20                              |
| Greenhouse Gas (CO <sub>2</sub> e)                                  | 23,584,211.38                      |
| Hazardous Air Pollutants (HAPs - Individual)                        | 44.04                              |
| Hazardous Air Pollutants (HAPS - Aggregate)                         | 107.48                             |

NOx emissions from the new combustion turbines will be controlled with selective catalytic reduction (SCR) and CO emissions will be controlled with an oxidation catalyst.

## Resumen en Lenguaje Sencillo del Permiso Inicial de Revisión de Nuevas Fuentes Solicitud de Permiso de Revisión de Nuevas Fuentes de Aire Número [TBD]

*El siguiente resumen se proporciona para esta solicitud de permiso de aire pendiente que está siendo revisada por la Comisión de Calidad Ambiental de Texas, según lo dispuesto en el capítulo 39 del Código Administrativo de Texas. La información proporcionada en este resumen puede cambiar durante la revisión técnica de la solicitud y no son representaciones federales ejecutables de la solicitud de permiso.*

Fermi Equipment Holdco LLC (CN TBD) ha presentado una solicitud de permiso de aire con los números iniciales [NSR# PSDTX# GHGPSDTX#] para autorizar la construcción de una nueva central eléctrica de ciclo combinado alimentada con gas natural. El proyecto Matador de Fermi America (RN TBD), se instalará en un terreno sin desarrollar en el condado de Carson. El sitio se ubica al norte de la Ruta 60 de EE. UU., aproximadamente a 24 kilómetros al noreste de Amarillo, Texas. El proyecto Matador de Fermi America suministrará electricidad a un campus de centro de datos en el sitio.

Fermi Equipment Holdco LLC ha enumerado en la solicitud los contaminantes y las cantidades que se emitirán en cada instalación. A continuación, se muestra la cantidad total de cada contaminante que se propone emitir anualmente en todas las instalaciones.

| Los Contaminantes                                                 | Emisiones Propuestas<br>(toneladas por año) |
|-------------------------------------------------------------------|---------------------------------------------|
| Compuestos orgánicos volátiles (COV)                              | 581.75                                      |
| Monóxido de carbono (CO)                                          | 2,140.86                                    |
| Óxidos de nitrógeno (NOx)                                         | 1,591.48                                    |
| Dióxido de azufre (SO <sub>2</sub> )                              | 282.28                                      |
| Amoníaco (NH <sub>3</sub> )                                       | 1,370.78                                    |
| Partículas Totales (PM)                                           | 1,075.12                                    |
| Partículas de tamaño inferior a 10 micrones (PM <sub>10</sub> )   | 1,025.80                                    |
| Partículas de tamaño inferior a 2,5 micrones (PM <sub>2.5</sub> ) | 976.69                                      |
| Ácido sulfúrico (H <sub>2</sub> SO <sub>4</sub> )                 | 43.20                                       |
| Gases de efecto invernadero (CO <sub>2</sub> e)                   | 23,584,211.38                               |
| Contaminantes atmosféricos peligrosos (HAPs - Individual)         | 44.04                                       |
| Contaminantes atmosféricos peligrosos (HAPS - Aggregate)          | 107.48                                      |

Las emisiones de NOx de las nuevas turbinas de combustión se controlarán con reducción catalítica selectiva (SCR) y las emisiones de CO se controlarán con un catalizador de oxidación.

Texas Commission on Environmental Quality

## Public Involvement Plan Form for Permit and Registration Applications

The Public Involvement Plan is intended to provide applicants and the agency with information about how public outreach will be accomplished for certain types of applications in certain geographical areas of the state. It is intended to apply to new activities; major changes at existing plants, facilities, and processes; and to activities which are likely to have significant interest from the public. This preliminary screening is designed to identify applications that will benefit from an initial assessment of the need for enhanced public outreach.

All applicable sections of this form should be completed and submitted with the permit or registration application. For instructions on how to complete this form, see TCEQ-20960-inst.

### Section 1. Preliminary Screening

- ☒ New Permit or Registration Application  
☐ New Activity - modification, registration, amendment, facility, etc. (see instructions)

**If neither of the above boxes are checked, completion of the form is not required and does not need to be submitted.**

### Section 2. Secondary Screening

- ☒ Requires public notice,  
☐ Considered to have significant public interest, and  
☒ Located within any of the following geographical locations:

- Austin
- Dallas
- Fort Worth
- Houston
- San Antonio
- West Texas
- Texas Panhandle
- Along the Texas/Mexico Border
- Other geographical locations should be decided on a case-by-case basis

**If all the above boxes are not checked, a Public Involvement Plan is not necessary.  
Stop after Section 2 and submit the form.**

- ☒ Public Involvement Plan not applicable to this application. Provide **brief** explanation.

Project located in a remote, undeveloped area, and not considered to have significant public interest.

### Section 3. Application Information

#### Type of Application (check all that apply):

Air ☐ Initial ☐ Federal ☐ Amendment ☐ Standard Permit ☐ Title V  
Waste ☐ Municipal Solid Waste ☐ Industrial and Hazardous Waste ☐ Scrap Tire  
☐ Radioactive Material Licensing ☐ Underground Injection Control

#### Water Quality

☐ Texas Pollutant Discharge Elimination System (TPDES)  
☐ Texas Land Application Permit (TLAP)  
☐ State Only Concentrated Animal Feeding Operation (CAFO)  
☐ Water Treatment Plant Residuals Disposal Permit  
☐ Class B Biosolids Land Application Permit  
☐ Domestic Septage Land Application Registration

#### Water Rights New Permit

☐ New Appropriation of Water  
☐ New or existing reservoir

#### Amendment to an Existing Water Right

☐ Add a New Appropriation of Water  
☐ Add a New or Existing Reservoir  
☐ Major Amendment that could affect other water rights or the environment

### Section 4. Plain Language Summary

Provide a brief description of planned activities.

## Section 5. Community and Demographic Information

Community information can be found using EPA's EJ Screen, U.S. Census Bureau information, or generally available demographic tools.

**Information gathered in this section can assist with the determination of whether alternative language notice is necessary. Please provide the following information.**

(City)

(County)

(Census Tract)

Please indicate which of these three is the level used for gathering the following information.

☐

City

☐

County

☐

Census Tract

(a) Percent of people over 25 years of age who at least graduated from high school

(b) Per capita income for population near the specified location

(c) Percent of minority population and percent of population by race within the specified location

(d) Percent of Linguistically Isolated Households by language within the specified location

(e) Languages commonly spoken in area by percentage

(f) Community and/or Stakeholder Groups

(g) Historic public interest or involvement

## Section 6. Planned Public Outreach Activities

(a) Is this application subject to the public participation requirements of Title 30 Texas Administrative Code (30 TAC) Chapter 39?

☐ Yes ☐ No

(b) If yes, do you intend at this time to provide public outreach other than what is required by rule?

☐ Yes ☐ No

If Yes, please describe.

**If you answered "yes" that this application is subject to 30 TAC Chapter 39, answering the remaining questions in Section 6 is not required.**

(c) Will you provide notice of this application in alternative languages?

☐ Yes ☐ No

**Please refer to Section 5. If more than 5% of the population potentially affected by your application is Limited English Proficient, then you are required to provide notice in the alternative language.**

If yes, how will you provide notice in alternative languages?

- ☐ Publish in alternative language newspaper
- ☐ Posted on Commissioner's Integrated Database Website
- ☐ Mailed by TCEQ's Office of the Chief Clerk
- ☐ Other (specify)

(d) Is there an opportunity for some type of public meeting, including after notice?

☐ Yes ☐ No

(e) If a public meeting is held, will a translator be provided if requested?

☐ Yes ☐ No

(f) Hard copies of the application will be available at the following (check all that apply):

- ☐ TCEQ Regional Office ☐ TCEQ Central Office
- ☐ Public Place (specify)

## Section 7. Voluntary Submittal

For applicants voluntarily providing this Public Involvement Plan, who are not subject to formal public participation requirements.

Will you provide notice of this application, including notice in alternative languages?

☐ Yes ☐ No

What types of notice will be provided?

- ☐ Publish in alternative language newspaper
- ☐ Posted on Commissioner's Integrated Database Website
- ☐ Mailed by TCEQ's Office of the Chief Clerk
- ☐ Other (specify)

**Texas Commission on Environmental Quality**  
**Table 2**  
**Material Balance**

This material balance table is used to quantify possible emissions of air contaminants and special emphasis should be placed on potential air contaminants, for example: If feed contains sulfur, show distribution to all products. Please relate each material (or group of materials) listed to its respective location in the process flow diagram by assigning emission point numbers (taken from the flow diagram) to each material.

| List every material involved in each of the following groups | Emission Point No. from Flow Diagram | Process Rate <sup>1</sup><br>Check appropriate column at right to indicate process rate method. | Measurement | Estimation | Calculation |
|--------------------------------------------------------------|--------------------------------------|-------------------------------------------------------------------------------------------------|-------------|------------|-------------|
| Raw Materials - Input                                        |                                      |                                                                                                 |             |            |             |
| Fuels - Input                                                | Natural Gas<br>Diesel (ULSD)         | 402,436,809 MMBtu/yr<br>1,000,000 gallons/yr                                                    |             |            | X           |
| Products and By-Products - Output                            | Electricity                          | Approximately 6,000 MW                                                                          |             |            | X           |
| Solid Wastes - Output                                        |                                      |                                                                                                 |             |            |             |
| Liquid Wastes - Output                                       |                                      |                                                                                                 |             |            |             |
| Airborne Waste (Solid) - Output                              |                                      | See PI-1 Workbook                                                                               |             |            | X           |
| Airborne Wastes (Gaseous) - Output                           |                                      | See PI-1 Workbook                                                                               |             |            | X           |

<sup>1</sup> Specify the process rate of the facility using conventional engineering units (e.g., bbl/d, lb/yr, SCFM), and indicate the units next to each number. Standard Conditions: are 68°F 14.7 psia (30 Texas Administrative Code, Section 101.1(99)).

**Explanation (Table 2F Supplement):**

- <sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.
- <sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.
- <sup>3</sup> All records and calculations for these values must be available upon request.
- <sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.
- <sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.
- <sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).
- <sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.
- <sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.
- <sup>9</sup> Sum all values for this page.

**Explanation (Table 2F Supplement):**

<sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.

<sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.

<sup>3</sup> All records and calculations for these values must be available upon request.

<sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.

<sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.

<sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).

<sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.

<sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.

<sup>9</sup> Sum all values for this page.

**Explanation (Table 2F Supplement):**

- <sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.
- <sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.
- <sup>3</sup> All records and calculations for these values must be available upon request.
- <sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.
- <sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.
- <sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).
- <sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.
- <sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.
- <sup>9</sup> Sum all values for this page.

**TABLE 2F  
PROJECT EMISSION INCREASE**

|                                |    |                |     |
|--------------------------------|----|----------------|-----|
| <b>Pollutant <sup>1</sup>:</b> | PM | <b>Permit:</b> | TBD |
| <b>Baseline Period:</b>        | NA | <b>to</b>      | NA  |

|-------------------------------------------|
| <b>Explanation (Table 2F Supplement):</b> |
|-------------------------------------------|

- <sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.
- <sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.
- <sup>3</sup> All records and calculations for these values must be available upon request.
- <sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.
- <sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.
- <sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).
- <sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.
- <sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.
- <sup>9</sup> Sum all values for this page.

**TABLE 2F  
PROJECT EMISSION INCREASE**

|                                |      |                |     |
|--------------------------------|------|----------------|-----|

|-------------------------------------------|
| <b>Explanation (Table 2F Supplement):</b> |
|-------------------------------------------|

- <sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.
- <sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.
- <sup>3</sup> All records and calculations for these values must be available upon request.
- <sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.
- <sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.
- <sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).
- <sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.
- <sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.
- <sup>9</sup> Sum all values for this page.

|-------------------------------------------|
| <b>Explanation (Table 2F Supplement):</b> |
|-------------------------------------------|

- <sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.
- <sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.
- <sup>3</sup> All records and calculations for these values must be available upon request.
- <sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.
- <sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.
- <sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).
- <sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.
- <sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.
- <sup>9</sup> Sum all values for this page.

**Explanation (Table 2F Supplement):**

<sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.

<sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.

<sup>3</sup> All records and calculations for these values must be available upon request.

<sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.

<sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.

<sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).

<sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.

<sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.

<sup>9</sup> Sum all values for this page.

**Explanation (Table 2F Supplement):**

Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.

<sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.

<sup>3</sup> All records and calculations for these values must be available upon request.

<sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.

<sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.

<sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).

<sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.

<sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.

<sup>9</sup> Sum all values for this page.

**Explanation (Table 2F Supplement):**

<sup>1</sup> Individual Table 2F's should be used to summarize the project emission increase for each criteria pollutant.

<sup>2</sup> Emission Point Number as designated in NSR Permit or Emissions Inventory.

<sup>3</sup> All records and calculations for these values must be available upon request.

<sup>4</sup> Correct actual emissions for currently applicable rule or permit requirements, and periods of non-compliance. These corrections, as well as any MSS previously demonstrated under 30 TAC 101, should be explained in the Table 2F supplement.

<sup>5</sup> If projected actual emission is used it must be noted in the next column and the basis for the projection identified in the Table 2F supplement.

<sup>6</sup> Proposed Emissions (column B) minus Baseline Emissions (column A).

<sup>7</sup> Correction made to emission increase for what portion could have been accommodated during the baseline period. The justification and basis for this estimate must be provided in the Table 2F supplement.

<sup>8</sup> Obtained by subtracting the correction from the difference. Must be a positive number.

<sup>9</sup> Sum all values for this page.

Summary Sheet

This worksheet displays the total emission rates for all tabs. It should be reviewed after completing the necessary number of calculation tabs.

Emissions from compounds considered inert or not considered contaminants are set to zero.

| Calculation Sheet Name | EPN    | Total Emission Rate (hourly lbs/hr)<br>(excluding GHG / Inert / Not a Contaminant) | Total Emission Rate (annual, tpy)<br>(excluding GHG / Inert / Not a Contaminant) | Total VOC Emission Rate (hourly, lbs/hr) | Total VOC Emission Rate (annual, tpy) | Total Inorganic Emission Rate (hourly, lbs/hr) | Total Inorganic Emission Rate (annual, tpy) | Total Exempt Solvent Emission Rate (hourly, lbs/hr) | Total Exempt Solvent Emission Rate (annual, tpy) | Total GHG Emission Rate (tpy, mass basis) | Total GHG Emission Rate (tpy, CO <sub>2</sub> e) |

| Are your facilities subject to fugitive emission monitoring under 30 TAC §§115.324(1)(C) and 354(1)(A) or are you applying reduction credit for process drains?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | No    |
| If yes, please select the appropriate control efficiency:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |       |
| If yes, provide justification for the selected reduction credit. Note: Facilities subject to fugitive emission monitoring under 30 TAC §§115.324(1)(C) and 354(1)(A) are required to monitor process drains on an annual basis. A 75% reduction credit may be applied for annual monitoring of process drains at a leak threshold of 500 ppmv provided the drain is designed in such a manner that repairs to leaking drains can be achieved. For example, flushing a water seal on a leaking process drain would constitute repair, so a 75% reduction credit may be applied. Similarly, a 95% reduction credit can be applied for quarterly monitoring of drains if repairs to the leaking drains can be completed. |       |

| Are your facilities subject to fugitive emission monitoring under 30 TAC §§115.324(1)(C) and 354(1)(A) or are you applying reduction credit for process drains?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | No   |
| If yes, please select the appropriate control efficiency:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |      |
| If yes, provide justification for the selected reduction credit. Note: Facilities subject to fugitive emission monitoring under 30 TAC §§115.324(1)(C) and 354(1)(A) are required to monitor process drains on an annual basis. A 75% reduction credit may be applied for annual monitoring of process drains at a leak threshold of 500 ppmv provided the drain is designed in such a manner that repairs to leaking drains can be achieved. For example, flushing a water seal on a leaking process drain would constitute repair, so a 75% reduction credit may be applied. Similarly, a 95% reduction credit can be applied for quarterly monitoring of drains if repairs to the leaking drains can be completed. |      |

# Appendix B

## Emission Calculations

---

Fermi Equipment Holdco LLC  
NSR Air Permit Application Project Matador  
August 2025

Appendix B-1 Siemens SGT-800 Turbine

I. Basis

Emissions from the Siemens SGT-800 Turbine were calculated using a combination of vendor specs and BACT. Annual emissions are calculated assuming 8760 hours of operation annually. An SCR will be installed to control NOx emissions and a CO oxidation catalyst will be installed to control CO emissions..

BACT Standards

| Pollutant                | BACT Standard                                          | Averaging Time |
|--------------------------|--------------------------------------------------------|----------------|
| VOC                      | 2.0 ppmvd at 15% O <sub>2</sub>                        | 3-hr Average   |
| NOx                      | 2.0 ppmvd at 15% O <sub>2</sub>                        | 24-hr Average  |
| CO                       | 4.0 ppmvd at 15% O <sub>2</sub>                        | 3-hr Average   |
| PM / PM10 / PM2.5        | Compliance with MAER                                   | 1-hr Average   |
| SO2                      | Fuel sulfur content limited to 0.5 grains per 100 scf. | 1-hr Average   |
| NH <sub>3</sub> (Hourly) | 10.0 ppmvd at 15% O <sub>2</sub> (3-hr)                | 3-hr Average   |
| NH <sub>3</sub> (Annual) | 5.0 ppmvd at 15% O <sub>2</sub> (Annual)               | Annual         |

Notes

Note 1: S content in fuel 0.5 grain / 100 dscf  
Note 2: H2SO4 calculated based on 10% SO2/SO3 conversion.  
Note 3 :(NH4)2SO4 calculated based on 10% SO2/SO3 conversion.

Formulas / Example Calculations:

Exhaust mole flow rate = exhaust mass flow rate / flue gas molecular weight = lb/hr / lb/lb-mole = lb-mole/hr  
Dry exhaust mole flow rate = lb-mole/hr x (1- %H2O/100)  
Dry mole flow rate at 15% O2 = dry lb-mole/hour x (20.9 - % O2 dry)/(20.9/15)  
Pollutant lb/hr = lb-mole/hr, dry basis, at 15 % O2 x ppmvd @ 15% O2 dry /10<sup>6</sup> x molecular weight, lb/lb-mole

Fermi Equipment Holdco LLC  
NSR Air Permit Application Project Matador  
August 2025

Appendix B-1 Siemens SGT-800 Turbine

I. Basis

Emissions from the Siemens SGT-800 Turbine were calculated using a combination of vendor specs and BACT. Annual emissions are calculated assuming 8760 hours of operation annually. An SCR will be installed to control NOx emissions and a CO oxidation catalyst will be installed to control CO emissions..

BACT Standards

| Pollutant                | BACT Standard                                          | Averaging Time |
|--------------------------|--------------------------------------------------------|----------------|
| VOC                      | 2.0 ppmvd at 15% O <sub>2</sub>                        | 3-hr Average   |
| NOx                      | 2.0 ppmvd at 15% O <sub>2</sub>                        | 24-hr Average  |
| CO                       | 4.0 ppmvd at 15% O <sub>2</sub>                        | 3-hr Average   |
| PM / PM10 / PM2.5        | Compliance with MAER                                   | 1-hr Average   |
| SO2                      | Fuel sulfur content limited to 0.5 grains per 100 scf. | 1-hr Average   |
| NH <sub>3</sub> (Hourly) | 10.0 ppmvd at 15% O <sub>2</sub> (3-hr)                | 3-hr Average   |
| NH <sub>3</sub> (Annual) | 5.0 ppmvd at 15% O <sub>2</sub> (Annual)               | Annual         |

Appendix B-4 Black Start Generators

I. Basis

Black Start generators are fired with Ultra low sulfur diesel (ULSD). The Reciprocating Internal Combustion Engines (RICE) are used to support gas turbine startup activities. Short-term emissions were calculated based on the maximum rated power output of the engine using EPA Tier 2 emission factors. Annual emissions were based on the maximum rated power of the engine, EPA Tier 2 emission factors, and annual hours of operation. The RICE are subject to 40 CFR 60 Subpart IIII, and the proposed emission rates meet the NSPS for Stationary Compression Ignition Internal Combustion Engines.

II. Supplemental Engines - Diesel

| Pollutant                                                         | Emission Factor |                                |
|-------------------------------------------------------------------|-----------------|--------------------------------|
|                                                                   | g/hp-hr         | Source                         |
| CO                                                                | 2.61            | EPA Tier 2 Emissions Certified |

Appendix B-5 Emergency Engines

I. Basis

Ultra low sulfur diesel (ULSD) emergency-use Reciprocating Internal Combustion Engines (RICE) will be installed to pump water or foam during fires and provide emergency power. Short-term emissions were calculated based on the maximum rated power output of the engine using EPA Tier 2 and 3 emission factors. Annual emissions were based on the maximum rated power of the engine, EPA Tier 2 and 3 emission factors, and annual hours of operation. The RICE are subject to 40 CFR 60 Subpart IIII, and the proposed emission rates meet the NSPS for Stationary Compression Ignition Internal Combustion Engines. Note that the site will also install electric powered fire water pumps that are not emission sources for permitting.

II. Emission Factors - ULSD Emergency Fire System Pump RICE

| Pollutant                              | Emission Factors |                                |
|----------------------------------------|------------------|--------------------------------|
|                                        | g/hp-hr          | Source                         |

**Appendix B-6 Cooling Towers**

**I. Basis**

Emissions from the cooling towers are calculated using a 0.001 % drift loss factor and the circulation rate, per TCEQ BACT requirements. The PM/PM10/PM2.5 size fractions are calculated using the methodology presented "Calculating Realistic PM10 Emissions from Cooling Towers" by Joel Reisman and Gordon Frisbie. The cooler is used to cool heat exchangers that do not contain VOC. As such, there is no potential for VOC leakages into the cooling water.

**II. Emission Calculations**

**Appendix B-7 Lube Oil Recirculation System Vents**

**I. Basis**

The heating of recirculating lube oil in the gas turbine housing generates oil vapor and oil condensate droplets in the oil reservoir compartments. Lube oil mist emissions are controlled by a mist eliminator.

Unloading, storage, and heated recirculation of lube oil in gas turbine reservoirs will result in losses of about 0.2 gallons per day per vent, based on oil consumption for similar units. Per engineering estimates, approximately 30% of the loss is due to evaporation, and the rest are non-volatile losses. The calculated hourly emissions are based on the daily emission rate divided by 24 hours per day.

Lube oil mist will be generated and the corresponding mist eliminator fan will be operated concurrently with turbine operation, including during startup and shutdown, plus additional time after turbine operation. When the gas turbine does not operate for extended periods such that lube oil is cooled to near-ambient temperatures, mist eliminators may be shut down. During this time, vapor breathing and filling losses may occur from each oil reservoir. These latter losses are significantly less than the emission rates calculated on this sheet.

**II .Calculations**

**Appendix B-8 Natural Gas Piping Fugitives**

**I. Basis**

This represents natural gas piping components associated with the project. Emission factors utilized were from EPA-453/R-95-017, November 1995, Table 2-4, Oil and Gas Operation Average Emission Factors. Component counts and average composition calculated from process flow diagrams and engineering counts. All open-ended lines are capped or blind-flanged. In accordance with TCEQ guidance, components under vacuum with a vapor pressure at least 0.725 psi below ambient are recorded though no emissions result from these components.

| Overall Fugitives Count and Total Emissions (EPN NGFUG) |              |                 |                                                   |                    |                      |                 |

**Fermi Equipment Holdco LLC  
NSR Air Permit Application Project Matador  
August 2025**

**Appendix B-8 Natural Gas Piping Fugitives**

**I. Basis**

**Sample Calculations - Flange & Connectors in Gas Service**

Maximum Hourly Emissions, lb/hr = (Number of Components) \* (Emission Factor, lb/hr/component) \* (1-Control Credit)

$$\text{lb/hr} = \frac{1,242 \text{ components}}{\text{component}} \times \frac{0.00086 \text{ lb/hr}}{\text{component}} \times \frac{1 - 0.00}{\text{component}} = 1.068 \text{ lb/hr}$$

Annual Emissions, tpy= (Number of Components) \* (EF, lb/hr/component) \* (Number of Hours/Year) \* (1-Control Credit) \* (1 ton per 2,000 lbs)

$$\text{tpy} = \frac{1,242 \text{ components}}{\text{component}} \times \frac{0.00086 \text{ lb/hr}}{\text{component}} \times \frac{8,760 \text{ hours}}{\text{year}} \times \frac{1 - 0.00}{\text{component}} \times \frac{1 \text{ ton}}{2,000 \text{ lb}} = 4.677 \text{ tpy}$$

**II. Speciated Emissions**

| Compound                   | Weight Fraction | Hourly (lb/hr) | Annual (tpy) |
|----------------------------|-----------------|----------------|--------------|
| Carbon Dioxide             | 0.50%           | 0.04           | 0.16         |

**Appendix B-9 SCR Delivery System Fugitives**

**I. Basis**

This represents fugitive components associated with the SCR delivery system. Emission factors utilized were the SOCM I w/o ethylene factors from *Air Permit Technical Guidance for Chemical Sources: Fugitive Guidance (APDG 6422), June 2018*. Component counts and average composition calculated from process flow diagrams and engineering counts. All open-ended lines are capped or blind-flanged. In accordance with TCEQ guidance, components under vacuum with a vapor pressure at least 0.725 psi below ambient are recorded though no emissions result from these components.

| Overall Fugitives Count and Total Emissions (EPN NH3FUG) |              |                 |                                                   |                                       |                      |                 |

[1] Emission factors utilized are for the SOCM I without ethylene program specified in "Air Permit Technical Guidance for Chemical Sources: Fugitive Guidance (APDG 6422)" dated June 2018.

[2] Relief valves are equipped with a rupture disc and pressure sensing device (between the valve and disc) to monitor for disc integrity. Therefore, 100% control efficiency applied as per, "Air Permit Technical Guidance for Chemical Sources: Fugitive Guidance (APDG 6422)" dated June 2018.

[3] Open-ended lines and drains at the facility are equipped with a cap and therefore 100% control efficiency applied as per, "Air Permit Technical Guidance for Chemical Sources: Fugitive Guidance (APDG 6422)" dated June 2018.

[4] Air Permit Technical Guidance for Chemical Sources: Fugitive Guidance (APDG 6422) dated June 2018.

**Appendix B-9 SCR Delivery System Fugitives**

**I. Basis**

**Sample Calculations - Flange & Connectors in Light Liquid Service**

Maximum Hourly Emissions, lb/hr = (Number of Components) \* (Emission Factor, lb/hr/component) \* (1-Control Credit)

$$\text{lb/hr} = \frac{1,176 \text{ components}}{\text{component}} \times \frac{0.0005 \text{ lb/hr}}{\text{component}} \times \frac{1 - 0.97}{\text{component}} = 0.018 \text{ lb/hr}$$

Annual Emissions, tpy= (Number of Components) \* (EF, lb/hr/component) \* (Number of Hours/Year) \* (1-Control Credit) \* (1 ton per 2,000 lbs)

$$\text{tpy} = \frac{1,176 \text{ components}}{\text{component}} \times \frac{0.0005 \text{ lb/hr}}{\text{component}} \times \frac{8,760 \text{ hours}}{\text{year}} \times \frac{1 - 0.97}{\text{component}} \times \frac{1 \text{ ton}}{2,000 \text{ lb}} = 0.077 \text{ tpy}$$

**II. Speciated Emissions**

| Compound | Weight Fraction | Hourly (lb/hr) | Annual (tpy) |
|----------|-----------------|----------------|--------------|
| Ammonia  | 19.00%          | 0.02           | 0.09         |
| Water    | 81.00%          | 0.09           | 0.40         |

Appendix B-10a Diesel Storage Fixed Roof Tanks

I. Basis

Short-term emissions from the loading of storage tanks are estimated based on the TCEQ Air Permit Reviewer Reference Guide, APDG 6250v13, Released 02/20; "Estimating Short Term Emission Rates from Fixed Roof Tanks," Equation 1, which is based on the TCEQ's policy of using the Ideal Gas Law (IGL) assuming the maximum storage temperature and maximum filling rate. Annual emissions are calculated using factors for vertical fixed-roof tanks obtained from EPA document AP-42, Fifth Edition, Chapter 7. All fixed-roof tanks are uncontrolled.

II. Maximum Hourly Emissions

| Tank ID                     | EPN      | Tank Description | Material | Component | Component Liquid Mass Fraction (%) | FR <sub>M</sub>               | M <sub>v</sub> max                        | P <sub>v</sub> max            | Maximum Storage Temperature (°R) | Tank Size (gal) | Control Efficiency | Vapor VOC Mass Fraction | Maximum VOC Hourly Emissions (lb/hr) |

Appendix B-10c Diesel Storage Fixed Roof Tanks Sample Calculation

Vertical Fixed Roof Tank Sample Calc

**Basis** Fixed Roof tank emissions calculations are based on the methodology presented in AP-42 Chapter 7. The short-term emissions are calculated using the methodology described in TCEQ Memo "Estimating Short Term Emission Rates from Tanks" (APDG 6250v1, Released 09/14).

**Tank Selection** Diesel Tank 1

Appendix B-10c Diesel Storage Fixed Roof Tanks Sample Calculation

$$\Delta P_V = 8.09E-03 \text{ psia} - 4.95E-03 \text{ psia} = 3.14E-03 \text{ psia}$$

Breather Vent Pressure Setting Range  
 $\Delta P_B = P_{BP} - P_{BV}$

$$\Delta P_B = 0.03 \text{ psia} - -0.03 \text{ psia} = 6.00E-02 \text{ psia}$$

Vapor Density (lb/ft^3)  
 $W_V = M_V \cdot P_{VA} / R \cdot T_V$   
 $W_V =$

|              |               |                  |          |   |          |      |
|--------------|---------------|------------------|----------|---|----------|------|
| 130 lb/lbmol | 6.37E-03 psia | lbmol °R         | 1        | = | 1.48E-04 | lb   |
|              |               | 10.731 psia ft^3 | 520.26 R |   |          | ft^3 |

Vapor Space Expansion Factor  
For vapor pressure >0.1 psi,  $K_E = \Delta T_V / T_{LA} + (\Delta P_V - \Delta P_B) / (P_A - P_{VA})$  (Equation 1.5)

$$K_E = \frac{28.74}{519.33} \frac{R}{R} + \frac{3.14E-03 \text{ psi} - 0.06 \text{ psi}}{13.0 \text{ psi} - 6.37E-03 \text{ psi}} = \text{####}$$

Note, a negative  $K_E$  indicates no standing losses will occur.

Vented Vapor Saturation Factor  
 $K_S = 1 / (1 + 0.053 P_{VA} H_{VO})$   
 $K_S =$

|                                      |   |          |
|--------------------------------------|---|----------|
| 1                                    | = | 9.95E-01 |
| 1 + 0.053 * 6.37E-03 psia * 15.63 ft |   |          |

Vent Setting Correction Factor  
When breather vents greater than 0.03 psig use the following equation to calculate vent setting correction factor

When

$$K_N \left[ \frac{P_{BP} + P_A}{P_I + P_A} \right] > 1.0$$
$$K_B = \left[ \frac{\frac{P_I + P_A}{K_N} - P_{VA}}{P_{BP} + P_A - P_{VA}} \right] = 1.00$$

Standing Storage Losses (lb/yr):  
 $L_S = 365 W_V V_V K_E K_S$

$$L_S = 365 \cdot 1.48E-04 \text{ lb/ft}^3 \cdot 1767.15 \text{ ft}^3 \cdot 5.09E-02 \cdot 9.95E-01 = 4.85E+00 \text{ lb/year}$$

Working Losses (lb/yr):  
 $L_W = V_Q K_N K_P W_V K_B$

$$L_W = \frac{33420.14 \text{ ft}^3}{\text{year}} \cdot 1.00 \cdot 1.00 \cdot \frac{1.48E-04 \text{ lb}}{\text{ft}^3} \cdot 1 \cdot \text{year} = 4.9567E+00 \frac{\text{lb}}{\text{year}}$$

Total Losses (lb/yr):  
 $L_T = L_S + L_W$

$$L_T = \frac{4.85E+00 \text{ lb}}{\text{year}} + \frac{4.96E+00 \text{ lb}}{\text{year}} = 9.805E+00 \frac{\text{lb}}{\text{year}} = 4.90E-03 \frac{\text{tons}}{\text{year}}$$

Total Losses - Controlled (ton/yr):  
 $L_{TCont} = L_T \cdot (100\% - DRE)$

$$L_{TCont} = 4.90E-03 \frac{\text{tons}}{\text{year}} \cdot (100\% - 00\%) = 4.90E-03 \frac{\text{tons}}{\text{year}}$$

Appendix B-11 Sulfur Hexafluoride (SF6) Insulated Equipment

I. Basis

Emissions of sulfur hexafluoride (SF<sub>6</sub>) from electrical equipment such as generator circuit breakers and high voltage breakers associated with the proposed units were calculated using the estimated circuit breaker SF<sub>6</sub> content and an engineering-estimated annual leakage rate. The Global Warming Potential (GWP) was obtained from EPA's Greenhouse Gas Reporting Program (GHGRP) codified at 40 CFR Part 98.

| Unit                    | Circuit Breaker SF6 Capacity (lbs) | Number of Units | Total Capacity (lbs) | Annual Leakage Rate (%) | SF6 Global Warming Potential (GWP) | SF6 Emissions (lbs/year) | CO <sub>2</sub> e Emissions (Metric Tonnes) | CO <sub>2</sub> e Emissions (Short Tons) |
|-------------------------|------------------------------------|-----------------|----------------------|-------------------------|------------------------------------|--------------------------|---------------------------------------------|------------------------------------------|

**Appendix B-12 GHG Emissions**

**I. Basis**

GHG emissions are calculated by taking the total natural gas and other fuel usage and emission factors for fuel combustion from 40-CFR 98. Global warming potentials from IPCC AR5 are utilized to calculated potential CO2 equivalent emissions.

| FIN       | EPN       | Fuel Type   | Usage (MMBtu) | CO <sub>2</sub> Emission<br>Factor (kg<br>CO <sub>2</sub> /MMBtu) | CH <sub>4</sub> Emission<br>Factor (kg<br>CH <sub>4</sub> /MMBtu) | N <sub>2</sub> O Emission<br>Factor (kg<br>N <sub>2</sub> O/MMBtu) | CH <sub>4</sub> GWP | N <sub>2</sub> O GWP | CO <sub>2</sub> Metric<br>Tonnes | CH <sub>4</sub> Metric<br>Tonnes | N <sub>2</sub> O Metric<br>Tonnes | CO <sub>2</sub> e (Metric<br>Tonnes) | CO <sub>2</sub> e (Short Tons) |

**Appendix B-12 GHG Emissions**

**I. Basis**

GHG emissions are calculated by taking the total natural gas and other fuel usage and emission factors for fuel combustion from 40-CFR 98. Global warming potentials from IPCC AR5 are utilized to calculated potential CO2 equivalent emissions.

| FIN      | EPN      | Fuel Type           | Usage (MMBtu) | CO <sub>2</sub> Emission<br>Factor (kg<br>CO <sub>2</sub> /MMBtu) | CH <sub>4</sub> Emission<br>Factor (kg<br>CH <sub>4</sub> /MMBtu) | N <sub>2</sub> O Emission<br>Factor (kg<br>N <sub>2</sub> O/MMBtu) | CH <sub>4</sub> GWP | N <sub>2</sub> O GWP | CO <sub>2</sub> Metric<br>Tonnes | CH <sub>4</sub> Metric<br>Tonnes | N <sub>2</sub> O Metric<br>Tonnes | CO2e (Metric<br>Tonnes) | CO2e (Short Tons) |

**Appendix B-13a Air Intake Filter**

**I. Basis**

During air intake filter maintenance, particulate emissions will be generated due to handling of particles dislodged from the filter. Emissions are calculated using EPA AP-42 Chapter 13.2.4 "Aggregate Handling and Storage Piles".

| Sludge/Sediment Management | 5.00                                 | 45.01                                             | 19075.00                                                      | 1960.00                                                        | 23,181,275                                   | 59,548                                                    | 0.30  | 0.06   |

- Notes:**
- 1. Engineering Estimate.
  - 2. Assumes worst-case monthly volume of sludge removed in one 40-hour week.
  - 3. The emission calculations below represent the worst case emissions that could occur during routine maintenance or a unit turnaround. For calculation purposes, sludge management via vacuum truck was considered, but emissions from an open pit are provided as more conservative.

**Sample Calculations:**

Annual Emissions (ton/yr) = Total Mass of Sludge (lbs/yr) x VOC Concentration (ppmw) / 1,000,000 / 2000 lb/ton  
= (23,181,275 lbs/yr) \* (5 ppmw) / 1,000,000 / 2000 lbs/ton = 0.06 tpy

Hourly Emissions (lb/hr) = Total Mass of Sludge (lbs/hr) x VOC Concentration (ppmw) / 1,000,000  
= (59,548 lbs/hr) \* (5 ppmw) / 1,000,000 = 0.30 lb/hr

Appendix B-13e Small Equipment Maintenance - NH3

I. Basis

Small equipment containing ammonia will require occasional opening and maintenance. After opening, residual ammonia within the equipment will be vented to atmosphere, resulting in emissions of ammonia. Emissions are calculated using the ideal gas law, and estimated equipment parameters.

Step 1. Equipment Opening Maintenance Vapor Space Calculation:

| L <sub>o</sub> Opening Loss |                                                    |         | Source/Notes/Assumptions                                                                                        |
|-----------------------------|----------------------------------------------------|---------|-----------------------------------------------------------------------------------------------------------------|
|                             |                                                    |         | Based on the Ideal Gas Law with modification for VOC molecular weight.                                          |
| P                           | Vapor Pressure of Material (psia)                  | 14.70   | Since the vapor pressure of anhydrous ammonia is greater than 14.7 the tank pressure prior to venting was used. |
| V                           | Vapor space volume (feet <sup>3</sup> )            | 0.08522 | Based on worst case equipment: 10 feet of 2 inch pipe                                                           |

**Appendix B-13f Small Equipment Maintenance - Low VP**

**I. Basis**

During maintenance of small equipment associated with the diesel generators, emissions are generated by residual product clingage, liquid draining, and evaporation. Emissions are calculated using small equipment sizing based on historical information and process knowledge.

**Step 3. Evaporative Loss Calculation:**

| Variables                                                                                                                                               |                                                                    |                 | Source/Notes/Assumptions                                                                                                                                                                   |

Appendix B-13g Gaseous Fuel Venting

I. Basis

During turbine maintenance, gaseous fuel lines may need to be purged to facilitate maintenance operations. The emissions associated with these activities are calculated using the ideal gas law, and fuel line sizing.

| Piping Description | Initial Conditions                                |                                               |               |               |        | Final Conditions |            |                                      |                                  |        | Number of Turbines | Emissions      |              |

1. Initial volume is calculated by multiplying the cross sectional area by the length of pipe using the following formula:  $V_i = \pi * [(diameter\ in\ inches/12)/2]^2 * length\ in\ feet = ft^3$
2. Final volume calculated using ideal gas law  $[(PV/RT)_i = (PV/RT)_f]$ .  $V_f = V_i (P_i/P_f) (T_f/T_i) (Z_i/Z_f)$ , where Z is estimated using the following equation:  $Z = 0.9994 - 0.0002P + 3E-08P^2$ .
3. Additional Assumptions:
- Nat Gas MW 16.48 lb/lbmol (From Natural Gas Analysis)
- VOC Content of Nat Gas : 0.009% by mass (From Natural Gas Analysis)
- H<sub>2</sub>S Content of Nat Gas : 0.001% by mass (From Natural Gas Analysis)
- CO<sub>2</sub> Content of Nat Gas : 0.50% by mass (From Natural Gas Analysis)
- CH<sub>4</sub> Content of Nat Gas : 97.35% by mass (From Natural Gas Analysis)

Example calculation:

|         |           |               |                |   |          |       |

Appendix B-13h Offline Turbine Washing

I. Basis

Turbines require occasional washing, utilizing a VOC cleaner, diluted with water. Emissions are generated by the evaporation of VOC in the cleaner solution after application. Annual emissions are calculated based upon estimated usage.

## Appendix B-13i Online Turbine Washing

While the turbines are online, the blades require water washes to reduce gross accumulation of airborne particulates between offline washes and compressor maintenance. During online washes, water is sprayed at approximately 12 gallons per minute, dislodging any accumulated particulate on the blade surfaces. The water and dislodged material is pulled into the turbines, where it passes through the compressor. Any water will evaporate due to the high compressor temperature, but any residual particulates will exit through the turbine stack. Note that during online washing events, the turbine is not fired, but rather in a maintenance mode. As such, normal combustion emissions do not occur. As the particulate emissions generated by online washing are less than normal particulate generation, there is no net increase in hourly PM emissions from the stack. Similarly, as the turbines are authorized for 8760 hours of normal operation, periods of online washing will also offset a period of normal operation, and therefore there will be no increase in annual PM emissions either.

1. Surface area based on assumption of 17 4' blades for large frame turbines and 17 2' blades for Siemens SGT800 turbines
